Question No: 2

Which configuration on Cisco UCM is required for SIP MWI to work?

- **A.** Assign an MWI extension on the mailbox.
- **B.** The line partition must be inside the inbound CSS assigned to the CUC SIP trunk.
- **C.** The line partition must be inside the rerouting CSS assigned to the Cisco Unity Connection SIP trunk.
- **D.** Set the "Enable message waiting indicator" on the port group.

Answer: B

Explanation:

The line partition must be inside the inbound CSS assigned to the CUC SIP trunk. This ensures that the SIP MWI messages are sent to the correct destination.

The other options are incorrect because:

- Assigning an MWI extension on the mailbox is not required for SIP MWI to work.
- The line partition does not need to be inside the rerouting CSS assigned to the Cisco Unity Connection SIP trunk.

Question No: 3

What must be configured on a Cisco Unity Connection voice mailbox to access the mailbox from a secondary device?

- A. mobile user
- B. alternate names
- C. alternate extensions

Explanation: To access a Cisco Unity Connection voice mailbox from a secondary device, you must configure an alternate extension for the mailbox. This is a phone number that is different from the mailbox's primary extension. When you call the alternate extension, you will be prompted to enter the mailbox's PIN. Once you have entered the PIN, you will be able to access the mailbox just as you would if you were calling from the primary device.
