

Blue Prism AIE02 Exam

Volume: 45 Questions

Question: 1

What algorithm is used to encrypt Credentials stored within Blue Prism? (select one)

- A. It always uses AES-256 and a key that is randomly generated when the Application Server restarts
- B. It automatically uses the most cryptographically strong scheme that has been configured within the environment
- C. It uses the algorithm and key defined on the encryption scheme that is currently selected as the Credentials Encryption Scheme
- D. It uses the algorithm defined on the encryption scheme that is currently selected as the Credentials Encryption Scheme along with a key that is randomly generated when the Application Server restarts

Answer: C

Question: 2

What does the /SSLCert switch provide when starting a Runtime Resource? (select two)

- A. It ensures that the Runtime Resource establishes a secure outbound connection with the Application Server or Database Server
- B. It ensures that inbound connections on the listening port (default 9181) will be encrypted
- C. When hosting Web Services on the Runtime Resources, the inbound connections will need to use HTTPS
- D. Only users who have used a domain account to log onto the device can launch Blue Prism

Answer: A,B

Question: 3

Which of the following MUST be considered when deploying Login Agent? (select four)

- A. A number of security settings need to be appropriately configured/disabled on each device where it runs (e.g. ctrl + alt + del prior to login must be disabled)

Blue Prism AIE02 Exam

- B. The Login Agent Runtime Resource is configured to use one of the Blue Prism connections configured on the local device
- C. Editing the configuration of the Login Agent Runtime Resource can be done within the appropriate configuration file
- D. Login Agent can only be used on devices that are members of a Active Directory Domain Network Infrastructure
- E. Once a device has been logged in, a conventional Runtime Resource needs to be configured to start automatically (which will automatically shut-down the Login Agent Runtime Resource)

Answer: A,B,C

Question: 4

What is the Blue Prism interactive Client used for? (select three)

- A. It is responsible for automatically starting and stopping schedules
- B. In non-production environment. it is where automated processes are designed and verified
- C. In production environments, it is where automated processes are designed
- D. In production environments, it is used to monitor and control the platform
- E. In production environment, it is used to configure the platform and define schedules
- F. It is responsible for providing database connectivity to all connected devices

Answer: A,B,D

Question: 5

What are the minimum permissions required for business as usual access to the Blue Prism Database? (select one)

- A. dbowner
- B. datareader. datawrter
- C. datareader. dalawrter. all roles named with a prefix of bp_dba

Blue Prism AIE02 Exam

D. sysownec

E. all of the above

Answer: C

Question: 6

What BPService exe profile name is the default Blue Prism Server service configured to use? (select one)

A. It will use the profile within is configured with the "Is Default* ftag

B. It will use the first profile when ordered alphabetic ally

C. It will use the last profile when ordered alphabetically

D. It will use the profile named "Default

Answer: D

Question: 7

Which of the following statements are true in reference of the permissions required for the Blue Prism Application Server service log on user? (Select four)

A. When a BluePrism Server is configured with a SQL Server database connection that uses SQL Native Authentication, the service log on user needs SQL dbowner privileges

B. When the Blue Prism connection used by the server is configured to use SQL Native Authentication, the service log on user does not need any SQL privileges

C. When a Blue Prism Server is configured with a SQL Server database connection that uses SQL Windows Authentication, the service log on user needs the minimum permissions on the appropriate Blue Prism SQL Server database as identified in the documentation

D. When using Single Sign on for the Blue Prism platform, the service log on user needs permission to query Active Directory Security Group membership

E. When using Single Sign on for the Blue Prism platform, the service log on user needs to be a Domain Administrator

F. When using Blue Prism native authentication for the Blue Prism platform, the service log on

Blue Prism AIE02 Exam

user needs to be a Domain Administrator

G. When configured to use a connection mode that uses Transport encryption, the service log on user needs read-access to the associated certificate's private key

Answer: A,C,D,G

Question: 8

Where an environment has Blue Application Server(s) deployed, can Runtime Resources and Interactive Client be connected directly to the database? (select one)

A. Yes. it is potentially possible but this is not generally recommended. Devices connected directly to the database may be limited in terms of managing or leveraging Credentials

B. No. all Runtime Resources and Interactive Clients must be connected to the database a Blue Prism Application Server

C. Yes. but Runtime Resources that are connected directly to the database cannot be instructed to start processes by the scheduler

Answer: A

Question: 9

What conditions must be met for a conventional Runtime Resource to be able to receive an instruction and start processing (select three)

A. The device where the Runtime Resource is installed must be logged in

B. An Interactive Client must be logged in prior to starting the Runtime Resource

C. The Runtime Resource must be started

D. The network connectivity must be configured to allow the Runtime Resource to receive connection from all relevant Interactive Clients and Application Servers

E. All Application Servers must be configured to process schedules

F. The SSLCert switch must be configured on the Application Server

Answer: A,C,D
