Question No: 1

Which three types of clients can be scheduled with the +Schedule (Add Schedule) wizard in the Operations Center? (Select three.)

- A. Storage agent
- B. Application
- C. System
- D. File
- E. NAS
- F. Virtual

Answer: A,B,C

Question No: 2

What is the purpose of running PERFORM LIBACTION?

- A. automatically checks in the tapes
- B. gathers element, drive, WWN and serial numbers for a SCSI library
- C. defines the drives and paths automatically
- D. test connectivity to a VTL

Answer: C

Question No: 3

Which two statements are true regarding enabling Administrative command routing? (Select two.)

- A. The servers should be registered to each other using Register server command.
- B. Common administrator ID, password and authority must be available on the IBM Spectrum Protect servers.
- C. Common administrator ID 'SERVER\_CONSOLE' available on all the IBM Spectrum Protect servers is used.
- D. Command routing is not dependent on any administrator ID.
- E. The servers should be defined to each other using Define server command.

Answer: B,E

Question No: 4

A customer with a large Microsoft Hyper-V environment needs to back up the virtual environment. Many of the customer's virtual machines use attached iSCSI disks. Which strategy will back up these Microsoft Hyper-V clients?

- A. place an IBM Spectrum Protect client on each VM with iSCSI disks
- B. use default configurations of IBM Spectrum Protect for Virtual Environments
- C. only image backups are supported
- D. Microsoft Hyper-V clients require a client on each VM for backup

Answer: A

Question No: 5

Where can custom reports be defined in IBM Spectrum Protect that may be emailed to one or more recipients?

- A. the IBM Spectrum Protect Administration Center

- B. the IBM Spectrum Protect Management Console
- C. the IBM Spectrum Protect Reporting and Monitoring Center
- D. the IBM Spectrum Protect Operations Center

Answer: D

Question No: 6

What differentiates the IBM Spectrum Protect Suite Entry version from the IBM Spectrum Protect Suite Enterprise version?

- A. deduplication is not supported
- B. limited to only one IBM Spectrum Protect server
- C. limited to server-side directory containers
- D. limited to 100 TB of data managed

Answer: D

Question No: 7

Which three IBM Spectrum Protect housekeeping processes control the life cycle of a tape volume? (Select three.)

- A. delete volume
- B. move data
- C. reclamation
- D. move volume
- E. expiration
- F. migration

Answer: B,C,E

Question No: 8

Which two pieces of data must be available to establish the complete recommended IBM Spectrum Protect solution? (Select two.)

- A. Storage performance analysis
- B. Network switch configuration
- C. Service Level Agreement
- D. Skills inventory
- E. Software application inventory

Answer: A,E

Question No: 9

Which command will allow an administrator to mark an entire container as damaged?

- A. REPAIR CONTAINER
- B. AUDIT CONTAINER
- C. FIX CONTAINER
- D. UPDATE CONTAINER

Answer: B

Question No: 10

When would front-end capacity licensing be recommended?

- A. the daily backup amount is very low
- B. deduplication and compression will be used
- C. long term data retention will be used
- D. the software license bundle will be used, which includes IBM Spectrum Scale

Answer: C

Question No: 11

Which statement is true regarding inline data deduplication and client-side data deduplication?

- A. inline server data deduplication uses the same data deduplication that is used by client side data deduplication and existing server-side data deduplication with the IDENTIFY process.
- B. Inline server data deduplication is adapted from the ProtecTier data deduplication algorithm and is different from the client side deduplication algorithm
- C. Client side deduplication will influence inline server data deduplication and chunks will be optimized
- D. Client side deduplication has no influence on inline server deduplication, because the data will be reorganized in container pool structure

Answer: A

Question No: 12

In order for deduplication to be beneficial, which rule must the files meet?

- A. Files must be smaller than 1 GB.
- B. Files must not be encrypted.
- C. Files must be included using the FORCE option.
- D. Files must not contain unstructured data.

Answer: B

Question No: 13

What is a benefit of deploying IBM Spectrum Protect for Virtual Environments or Spectrum Protect Snapshots?

- A. VMW are snapshots consume space only on target
- B. snapshots replace the need for backups
- C. VSS integration is no longer required
- D. item level restores are possible

Answer: D

Question No: 14

What are two ways to determine when the IBM Spectrum Protect Server database was last backed up? (Select two.)

- A. Run the QUERY DBSPACE F=Dadministrative command.
- B. Run the QUERY VOLHIST TYPE=BACKUPFULL administrative command.
- C. Run the SHOW DBadministrative command.
- D. Run the QUERY DB F=Dadministrative command.
- E. Click the Servers pod of the IBM Spectrum Protect Operations Center.

Answer: B,E

Question No: 15

What is a consideration when sizing the offsite copy storage pool?

- A. It has to be large enough to hold data copied from the primary and onsite copy storage pools.
- B. It must be large enough to hold the incremental data for one day only.
- C. It must be large enough to hold the data copied from the primary storage pools.
- D. Because of the deduplication feature, offsite copy storage pools can be at least 10% smaller than the primary storage pool.

Answer: C

Question No: 16

Customer has 200 backup clients with a mix of AIX, Linux, and Windows. The customer also has a VMware environment with 1000 VMs. The data that is stored in the storage pools is in petabytes. Which license model is recommended for the customer environment?

- A. combined maximum of 100 terabytes of data under management.
- B. IBM Spectrum Protect Suite Front End Entry (TB)
- C. RESTORE STGPOOL restores files to a primary storage pool from copy storage pools.

Answer: B

Question No: 17

Which minimum parameter is required in the Windows client options file to set up the IBM Spectrum Protect Administrative Command Line Client communication with the IBM Spectrum Protect Server?

- A. SERVERNAME
- B. SERVERADDRESS
- C. TCPSERVERADDRESS
- D. TCPCLIENTADDRESS

Answer: C

Question No: 18

Which two empty recovery log directories must be defined before configuration of the IBM Spectrum Protect server instance? (Select two.)

- A. Failover log directory
- B. Mirror log directory
- C. Active log directory
- D. DB2 transaction log directory
- E. Archive log directory

Answer: C,E

Question No: 19

What ensures the storage pools, storage containers, and volumes are available to back up client data for multiple IBM Spectrum Protect servers?

- A. Run the QUERY VOL \* STGPOOL=\*administrative command from the Operations Center Command Builder.
- B. Click the Reports pod of the IBM Spectrum Protect Operations Center and run the Storage Status report.
- C. Click the Pools link in the Storage & Data Availability pod of the IBM Spectrum Protect Operations Center.
- D. Click the Servers pod and select details for storage with IBM Spectrum Protect Operations Center.
