- A. Public Key
- B. Private Key
- C. User Key
- D. Access Key
- E. Secret Key

Answer: D,E

Question No: 13

A VADP proxy can be optimized by collocating it on the same machine with which other component?

- A. IBM Spectrum Protect Plus Hypervisor
- B. IBM Spectrum Protect server
- C. vSnap server
- D. VMware vSphere server

Answer: A

Question No: 14

What is a step prior to upgrading a vSnap server?

- A. ensure the IBM Spectrum Protect Plus environment is backed up
- B. ensure all data has been migrated to the replication vSnap server
- C. update the VADP proxy first
- D. ensure all VADP proxies are suspended

Answer: C

Question No: 15

When working with options on the VADP proxy, what does the Softcap task limit control?

- A. the amount of storage capacity required on the proxy for running backup jobs
- B. the maximum backup window for completing a VMWare backup for a single proxy
- C. the number of concurrent VMs a proxy can process
- D. the minimum amount of RAM allocated for running tasks on the proxy

Answer: B

Question No: 16

What is an input to the IBM Spectrum Protect Plus Sizer spreadsheet?

- A. number of vSnap Storage Servers in the environment
- B. number of VADP Proxy Servers in the environment

- C. amount of data being protected
- D. maximum Number of Systems per SLA

Answer: D

Question No: 17

How is a vSnap server deployed by default with the IBM Spectrum Protect Plus V10.1.5 appliance?

- A. one vSnap server with the name localhost is automatically installed
- B. automatically if the deploy_vsnap_server option is set to yes in the config file
- C. one vSnap server with the name spphost is automatically installed
- D. it must be installed separately

Answer: B

Question No: 18
