SAP Certified Application Associate - Modeling and Data Acquisition with SAP BW 7.5 powered by SAP HANA

Version: 7.0

[Total Questions: 88]

Question No : 1

Which action can you perform when you select manager an Advanced Data store object?
Please choose the correct answer.

A. Display metadata.
B. create ae transfer process.
C. Selectively delete data.
D. Activate the advanced Data store object.

Answer: C

Question No : 2

SAP Landscape Transformation replication server with operational data provisioning
utilizes the operational delta queue (ODQ). Which of the following is an advantage of the
ODQ? Please choose the correct answer.

A. The ODQ uses a daemon for scheduling
B. The ODQ provides scheduling through infopackages independently of the data transfer
process setting.
C. The ODQ provides semantic parallelization for error handling.
D. The ODQ provides high data compression of 90% or more.

Answer: D

Question No : 3

You want to copy an SAP Business warehouse query from a source info provider to a
target info provider. Which prerequisite must be fulfilled? Please choose the correct
answer.

A. The query to be copied must NOT contain reusable query components.
B. The type of the source info provider and the target info provider must be the same
C. The target info provider must contain at least all the info objects

Answer: C

Question No : 4

Which of the following objects are available when you activate SAP Business objects Business Intelligence content?

There are 3 correct answers to this question.

A. Data flow
B. Calculation view
C. Process chain
D. Planning function
E. Aggregation level

Answer: A,C,E

Question No : 5

You need to create an SAP Business Warehouse data flow that combines data from two sources in an advanced Datastore object (DSO) There are different and value for the same entry in the source.

Which approach does SAP recommend? Please choose the correct answer.

A. Create an open ODS as a non-persistent intermediate layer to perform a join from the source dependent parts need to be implemented in the same transformation.
B. Create a composite provider as a non-persistent intermediate layer to perform a join from the source the source-dependent parts need to be implemented in the same transformation.
C. Create an infosource as a non-persistent intermediate layer.the source-dependent parts of the a transformation need to be implemented before the info source.
D. Create an infoset as a non-persistent intermediate layer.the source-dependent parts of the transformation need to be implemented before the info set.

Answer: B

Question No : 6

You need to delete data for a company code from an advanced Datastorg ghieet where do you do this?

A. Please choose the correct answer.
B. Select the request->delete
C. Environment menu->Selective Deletion
D. Environment menu->Delete content

E. Environment menu->remove inbound table

Answer: B

Question No : 7

You instantiate a non-persistent characteristic info object. Which options do you have?
There are 2 correct answers to this question.

A. Change existing in object
B. Create new in object
C. Use existing in object
D. Generate in object

Answer: B,C

Question No : 8

You use the query monitor transaction (RSRTI) to investigate the poor performance of a
query. Which actions do you perform when you use this transaction? There are 3 correct
answers to this question.

A. Debug the query
B. Maintain the read mode and the cache mode of the query.
C. Execute the query without using the cache
D. Maintain the technical info of the query.
E. Change the query definition

Answer: A,B,C

Question No : 9

Which tool do you use to monitor streaming process chains? Please choose the correct
answer.

A. Subscription monitor
B. Queued Task manager monitor
C. Operational Delta Queue monitor
D. Real-time Data acquisition monitor

Answer: C

Question No : 10

In the SAP business Warehouse Query Designer in the SAP HANA studio, what can you define using the cell editor? Please choose the correct answer.

A. Additional filters restrictions that apply to a complete column or row of the result set
B. Formulas and selections for cells to override the cell values
C. Cell references that can pass their results to variables processed with a replacement path
D. Help cells that serve as containers for help selections or formulas to display in the query

Answer: B

Question No : 11

Your customer needs views of data, defined by multiple conditions you create multiple conditions in a query and activate multiple conditions in the report. What is the effect on the report result? Please choose the correct answer.

A. The report result depends on the application of a logical OR between the conditions.
B. The report result depends on the application of a logical AND between the conditions.
C. The report result depends on the activation sequence of the conditions.
D. The report result is independent of the report drilldown.

Answer: B

Question No : 12

You need to create an SAP HANA calculation view and connect a fact table to a dimension view. Which type of node do you create? Please choose the correct answer.

A. Aggregation node
B. Star join node
C. Union node
D. Join node

Answer: B

Question No : 13

Which of the following process steps are common between a classical SAP Business warehouse process chain and an SAP HANA optimized process chain? Please choose the correct answer.

A. Roll up aggregates.Execute data transfer process to infocube
B. Execute data transfer process to datastore transfer object.generate database statistics
C. Execute data transfer pies atastore object.trigger delta merge.
D. Execute data transfer process to infocube.Execute attribute change run.

Answer: D

Question No : 14

You need to generate SAP HANA views SAP based on Business Warehouse (SAP BW) infoproviders Which activities do you perform to consume the There are 2 correct answers to this question.

A. Assign the SAP HANA user in SAP BW user administration
B. Migrate the SAP BW user roles in the HANA user.
C. Create an SAP HANA user with the identical name as the SAP BW user.
D. Create an SAP HANA role on the SAP BW role.

Answer: A,D

Question No : 15

You want to create a workbook that shows turnover per material group. Materials are organized hierarchically on three levels. Business users want to view the level 3. They also want to be able to aggregate on lower hierarchy levels.

How can they do this?

There are 2 correct answers to this question.

A. Open the hierarchy options of the material from hore bar and deselect the required level in the show levels option.
B. Open the hierarchy options of the material & the ment bar and select the required level

in the show levels option.

C. Open the context menu of tee in the analysis and expand the hierarchy of the required level.

D. Open the hierarchy options of the material from the ment bar and expand the hierarchy to the required level.

Answer: B,D

Question No : 16

You use SAP Landscape Transformation Replication sees th operational data provisioning. Which of the following data acquisition features are provided? There are 3 correct answers to this question.

A. Ability to use complex coded mapping rules
B. Direct update to SAP Business warehouse info providers
C. Removal of restrictions for extractors.
D. Real-time replication to SAP Business warehouse
E. Ability to use simple coded mapping rules

Answer: B,D,E

Question No : 17

Which advanced Datastore object modeling templates are available in SAP Business Warehouse? There are 2 correct answers to this question.

A. Compositeprovider
B. Open ODS view
C. Corporate memory with compression.
D. Data acquisition layer

Answer: C,D

Question No : 18

Which SAP Business warehouse (SAP BWobjects) are supported to generate external SAP HANA Views? There are 3 correct answers to this question.

A. SAP BW Multiprovider
B. SAP BW Data Source
C. SAP BW Info cubes (HANA optimized)
D. SAP BW queries
E. SAP BW advanced Data storeobject.

Answer: C,D,E

Question No : 19

Which technology do you use to load data from Microsoft Analysis Services to SAP Business Warehouse?

Please choose the correct answer.

A. Database Connect
B. Web service
C. File interface
D. Universal Data Connect

Answer: D

Question No : 20

You need to use SAP Data services for a controlled distribution of SAP Business warehouse (SAP BSD) to legacy systems and application. Which of the following activities must you perform? There are 3 correct answers to this question.

A. Craete a generic Data source in SAP BW as part of the data flow.
B. Create an SAP BW data flow to an open hub destination.
C. Create an SAP BW process chain to control data distribution.
D. Execute the SAP BW Process chain from SAP Data services.
E. Create a Data store in SAP Data services based on the Data source

Answer: C,D,E

Question No : 21

Which objects are mandatory when you create a transactional data flow in operational data

provisioning?

There are 2 correct answers to this question.

A. InfoPackage
B. Data transfer process
C. Transformation
D. Real-time daemon

Answer: B,C

Question No : 22

Our customer wants to create a composite provider to combine data form two advanced Data store objects(DSO). Which operation does the system propose, by default to combine the data of both advanced DSOs? Please choose the correct answer.

A. Left Outer join
B. Union
C. Join
D. Inner join

Answer: B

Question No : 23

You run a query containing many free characteristics and some external hierarchies should be as fast as possible. Which of the following read modes do you choose? Please choose the correct answer.

A. A Query to read all data at once
B. H Query to read when you navigate or expand hierarchies
C. X Query to read data during navigation

Answer: B

Question No : 24

The result of a calculation: Si Business Warehouse is incorrect, but the formula is correct. What options do you have to correct the calculation? There are 3 correct answers to this
