Engineering**

**Version: 2.0**

**[ Total Questions: 80 ]**

**Question No : 1**

What do you have to keep in mind when overwriting characteristic for a specific class?

- A. This change applies only to the characteristic, when it is used in this class.
- B. The status of this characteristic is automatically set to locked.
- C. This change applies only to the characteristic, when it is used in every class.
- D. The status of this characteristic is automatically set to incomplete.

**Answer: A**

**Question No : 2**

Which secure storage areas can be used inside a document info record? Note: There are 2 correct Answers to this question.

- A. HTTP Content Server
- B. FTP File Server
- C. SAP Database
- D. RFC Archive

**Answer: A,C**

**Question No : 3**

You use the app Find Objects in Classes. How do you find a class? Note: There are 2 correct Answers to this question.

- A. Via hierarchy
- B. Via change number
- C. Via assigned characteristics
- D. Via Class BOM

**Answer: A,C**

**Question No : 4**

Which organizational level is a Work Center assigned to?

- A. Plant
- B. Storage location
- C. Client
- D. Production supervisor

**Answer: A**

**Question No : 5**

When or why do you assign production resources and tools to an operation?

- A. To map the equipment of the Work Center with production resources and tools.
- B. To make additional production resources and tools available that do not belong to the equipment of the Work Center.
- C. To provide additional components which cannot be assigned to the BOM.
- D. To make them available for operation inspection only.

**Answer: B**

**Question No : 6**

You can use the syntax element \$set\_pricing\_factor for pricing in object dependencies. What do you need to consider? Note: There are 2 correct Answers to this question.

- A. Negative factors must not be used in \$set\_pricing\_factor.
- B. \$set\_pricing\_factor sets the variant condition and adds a factor to it. The variant condition must not already be assigned.
- C. You cannot use zero as a factor in \$set\_pricing\_factor.
- D. \$set\_pricing\_factor adds only one factor. The variant condition must already be assigned.

**Answer: B,C**

**Question No : 7**

The Work Center provides default values for the routing. Which of these default values is a mandatory entry if an operation is created in the routing?

- A. Standard text key
- B. Control key
- C. Standard value key
- D. Work Center

**Answer: B**

**Question No : 8**

Which prerequisites must be fulfilled before a configuration profile can be created and released for a configurable material?

- A. At least one variant class must be assigned to the configurable material. Values must be assigned to the characteristics here.
- B. At least one variant class must be assigned to the configurable material.
- C. At least one variant class must be assigned to the configurable material. Values must not be assigned to the characteristics here.
- D. Exactly one variant class must be assigned to the configurable material.

**Answer: C**

**Question No : 9**

You can assign object dependencies to different master data. Which assignments have no effect in variant configuration and only affect classification?

- A. Assignment to Classes
- B. Assignment to Characteristic Values
- C. Assignment to Configuration Profiles
- D. Assignment to Characteristics

**Answer: B**

**Question No : 10**

Working with the document status, what should you keep in mind? Note: There are 2 correct Answers to this question.

- A. It can be set at object link level.

- B. It can only be defined plant specific.
- C. It can be defined as a status network.
- D. It can be defined depending on document type.

**Answer: C,D**

**Question No : 11**

You create a new characteristic with numeric values and you only set a single value assignment. You add one interval inside value tab. What does it mean for classification?

- A. The user can set values which don't belong to the interval.
- B. The user can select an interval inside classification.
- C. The user can select one value of the interval inside classification.
- D. The user can select several values out of the interval inside classification.

**Answer: C**

**Question No : 12**

Which configuration process/scenario do you use for an Engineer To Order process?

- A. Planned/Production Order
- B. Order BOM
- C. Sales Order (SET)
- D. Engineering Order

**Answer: B**

**Question No : 13**

Which scenarios are available with the Maintain Bill of Material app?Note: There are 2 correct Answers to this question.

- A. Create a Version BOM.
- B. Attach a change order.
- C. Define Software Constraints.
- D. Display Valid From and Valid To information.

**Answer: A,C**

**Question No : 14**

You work with a Plan./Production Order without BOM explosion scenario. Which information is available? Note: There are 2 correct Answers to this question.

- A. In the sales order, no information about the BOM is displayed except the routing.
- B. In the simulation, no information about the BOM is displayed except the routing.
- C. In the simulation, information about the BOM and routing is displayed.
- D. In the sales order, no information about the BOM and routing is displayed.

**Answer: A,C**

**Question No : 15**

Some of your classifications are locked or incomplete. How do you find them? Note: There are 2 correct Answers to this question.

- A. Use the Characteristics list.
- B. Use Find in Classes and filter the search result.
- C. Use the Classification status.
- D. Use the Class list.

**Answer: B,C**

**Question No : 16**

The customer wants to see the cross-plant material status inside the object search in classification. How do you satisfy the customer's requirement?

- A. Add the cross-plant material status field to the database classification table.
- B. Change the screen sequence of the classification view.
- C. Create a custom data type in customizing.
- D. Create a reference characteristic.

**Answer: D**

**Question No : 17**

You define a Product Master from scratch and a pop-up becomes visible. Which data do you have to enter? Note: There are 2 correct Answers to this question.

- A. Description
- B. Industry Sector
- C. Product Type
- D. Organizational Level

**Answer: A,C**

**Question No : 18**

What do you have to keep in mind when creating a Product Master from scratch? Note: There are 2 correct Answers to this question.

- A. No view selection screen becomes visible.
- B. No organizational levels are asked.
- C. Only files can be connected and uploaded, no document info records.
- D. An industry sector can be selected.

**Answer: A,B**

**Question No : 19**

Which scenarios are possible when you upload files to a Product Master? Note: There are 2 correct Answers to this question.

- A. You can easily attach a Document Info Record.
- B. You cannot attach a Document Info Record.
- C. You can easily upload a file without selecting a Workstation Application and a Content Server.
- D. You can easily upload a file, select a Workstation Application and a Content Server.

**Answer: A,C**

**Question No : 20**

What objects can be changed with a change number? Note: There are 2 correct Answers to this question.

- A. Bills of Material
- B. Cost Centers
- C. Work Centers
- D. Task Lists

**Answer: A,D**

**Question No : 21**

What controls the material BOM item category? Note: There are 2 correct Answers to this question.

- A. A work center is required.
- B. A change number is required.
- C. A material number is required.
- D. A negative quantity is allowed.

**Answer: C,D**

**Question No : 22**

Which special feature must be taken into account for the material master of material variants for use in logistics?

- A. The material master requires a link to the configurable material at sales area level.
- B. The material master at client level requires the indicator that it can be configured.
- C. The material master requires a connection to the configurable material at client level.
- D. The material master requires a link to the configurable material at plant level.

**Answer: D**

**Question No : 23**

What is the significance of the control key? Note: There are 3 correct Answers to this question.

- A. It is a value that can be used as a default value in the routing.

- B. It is an optional field in the Work Center.
- C. It is a value that can be copied to the routing as a reference.
- D. It defines the usage of Work Centers in routings.
- E. It is a mandatory field in the Work Center.

**Answer: A,C,E**

**Question No : 24**

Which material types are used for configurable material masters?Note: There are 2 correct Answers to this question.

- A. Material type KMAT - configurable materials can only be created with this material type.
- B. Material types KMAT, HALB, and FERT - configurable materials can only be created with these material types.
- C. Each material type can be used in standard customizing for configurable material masters.
- D. Material type KMAT - each material master of this material type can be configured in a fixed way.

**Answer: A,C**

**Question No : 25**

A user releases a document info record with a change number. What effect does this action have on the document info record?Note: There are 2 correct Answers to this question.

- A. All document fields are locked.
- B. The document gets a revision level.
- C. The document displays the release key of the change number.
- D. The document info record uses the validity of a change number.

**Answer: B,D**

**Question No : 26**

Which routing objects can object dependencies be assigned to?Note: There are 3 correct Answers to this question.
