- A. Restore, browse existing backups, and queue backups
- B. Delete backups, and change retention settings
- C. Change retention settings, and modify clients and domains
- D. Restore, delete backups, and add new clients

Answer: A

Question No : 6

Which command do you use to end all client activities when adding an EMC Avamar storage node?

- A. dpnctl stop mcs
- B. avmaint config -ava
- C. avmaint suspend
- D. dpnctl stop ems

## **EMC E20-594 Exam**

Answer: C

Question No : 7

Which node types can be defined with the EMC Avamar dpnnetutil command?

- A. Storage, utility, access, accelerator, and spare
- B. Storage, utility, access, and spare only
- C. Storage, accelerator, and spare only
- D. Storage, access, and spare only

Answer: A

Question No : 8

By default, where are the cache files located on an EMC Avamar Windows backup client?

- A. C:\Program Files\lavs\var
- B. C:\Program Files\lavs\var\clientlogs
- C. C:\Program Files\lavs\administrator
- D. C:\Program Files\lavs\bin

Answer: A

Question No : 9

On an EMC Avamar server, what is the file extension of stripes that contain backup chunks?

- A. \*.dat
- B. \*.inx
- C. \*.chd
- D. \*.par

Answer: A

## **EMC E20-594 Exam**

Question No : 10

What would be an appropriate reason to deploy an EMC Avamar database accelerator?

- A. Reduces CPU utilization
- B. Required for NDMP and RMAN backups
- C. Increases network throughput
- D. Reduces the recovery time

Answer: A

Question No : 11

An EMC Avamar customer is deploying a backup solution consisting of two EMC Avamar servers (server A and server B) with replication. Which configuration provides seamless server failover capability?

- A. All clients back up to Avamar server A and backup data is replicated to Avamar server B using root-to-root replication.
- B. Clients of server A replicate to Avamar server B and clients of Avamar server B replicate to Avamar server A using Normal replication.
- C. Using root-to-root replication, clients of Avamar server A replicate to Avamar server B and clients of Avamar server B replicate to Avamar server A.
- D. All clients back up to Avamar server A and backup data is replicated to Avamar server B using Normal replication.

Answer: A

Question No : 12

What is the maximum number of nodes in a single AVE implementation?

- A. 1
- B. 3
- C. 4
- D. 5

## **EMC E20-594 Exam**

Answer: A

Question No : 13

What is the access mode of the server during an EMC Avamar checkpoint maintenance activity?

- A. Read-only during checkpoint creation; read-write for the remainder of the activity
- B. Read-only throughout the activity
- C. Access is disabled throughout the activity
- D. Access is disabled during checkpoint creation; read-only for the remainder of the activity

Answer: A

Question No : 14

When attaching directly to the management port of an EMC Avamar Data Store, which is the recommended IP address to assign to your laptop?

- A. 10.99.99.99
- B. 10.99.99.5
- C. 10.10.99.99
- D. 10.10.99.5

Answer: A

Question No : 15

Which level of data can be restored using EMC Avamar?

- A. Directories only
- B. Files only
- C. Files, directories, and file systems
- D. File systems only
