[Total Questions: 414]

Topic break down

Topic	No. of Questions
Topic 1: Contoso, Ltd	12
Topic 2: Fabrikam, Inc	14
Topic 3: Litware inc	8
Topic 4: NEW Case Study	9
Topic 5: Misc. Questions	371

Topic 1, Contoso, Ltd

This is a case study. **Case studies are not timed separately. You can use as much exam time as you would like to complete each case.** However, there may be additional case studies and sections on this exam. You must manage your time to ensure that you are able to complete all questions included on this exam in the time provided.

To answer the questions included in a case study, you will need to reference information that is provided in the case study. Case studies might contain exhibits and other resources that provide more information about the scenario that is described in the case study. Each question is independent of the other questions in this case study.

At the end of this case study, a review screen will appear. This screen allows you to review your answer and to make changes before you move to the next section of the exam. After you begin a new section, you cannot return to this section.

To start the case study

To display the first question in this case study, click the **Next** button. Use the buttons in the left pane to explore the content of the case study before you answer the questions. Clicking these buttons displays information such as business requirements, existing environment, and problem statements. When you are ready to answer a question, click the **Question** button to return to the question.

Overview

Contoso, Ltd. is a consulting company that has a main office in Montreal and two branch offices in Seattle and New York.

The offices have the users and devices shown in the following table.

Office	Users	Laptops	Desktops	Mobile devices
Montreal	2,500	2,800	300	3,100
Seattle	1,000	1,100	200	1,500
New York	300	320	30	400

Contoso recently purchased a Microsoft 365 E5 subscription.

Existing Environment

The network contains an Active directory forest named contoso.com and a Microsoft Azure Active Directory (Azure AD) tenant named contoso.onmicrosoft.com.

You recently configured the forest to sync to the Azure AD tenant.

You add and then verify adatum.com as an additional domain name.

All servers run Windows Server 2016.

All desktop computers and laptops run Windows 10 Enterprise and are joined to contoso.com.

All the mobile devices in the Montreal and Seattle offices run Android. All the mobile devices in the New York office run iOS.

Contoso has the users shown in the following table.

Name	Role
User1	<i>None</i>
User2	<i>None</i>
User3	Customer Lockbox access approver
User4	<i>None</i>

Contoso has the groups shown in the following table.

Name	Type	Membership rule
Group1	Assigned	<i>Not applicable</i>
Group 2	Dynamic	(user.department -eq "Finance")

Microsoft Office 365 licenses are assigned only to Group2.

The network also contains external users from a vendor company who have Microsoft accounts that use a suffix of @outlook.com.

Requirements

Planned Changes

Contoso plans to provide email addresses for all the users in the following domains:

- ✍ East.adatum.com
- ✍ Contoso.adatum.com
- ✍ Humongousinsurance.com

Technical Requirements

Contoso identifies the following technical requirements:

- ✍ All new users must be assigned Office 365 licenses automatically.
- ✍ The principle of least privilege must be used whenever possible.

Security Requirements

Contoso identifies the following security requirements:

- ✍ Vendors must be able to authenticate by using their Microsoft account when

accessing Contoso resources.

- ✍ User2 must be able to view reports and schedule the email delivery of security and compliance reports.
- ✍ The members of Group1 must be required to answer a security question before changing their password.
- ✍ User3 must be able to manage Office 365 connectors.
- ✍ User4 must be able to reset User3 password.

Question No : 1 HOTSPOT - (Topic 1)

You need to meet the security requirements for User3. The solution must meet the technical requirements.

What should you do? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Tool to use to add User3 to the role:

the Azure portal
the Exchange admin center
the Microsoft 365 admin center
the Security & Compliance admin center

Role to assign to User3:

Cloud application administrator
Global administrator
Organization Management
Security Administrator

Answer:

Tool to use to add User3 to the role:

the Azure portal
the Exchange admin center
the Microsoft 365 admin center
the Security & Compliance admin center

Role to assign to User3:

Cloud application administrator
Global administrator
Organization Management
Security Administrator

Explanation:

Tool to use to add User3 to the role:

the Azure portal
the Exchange admin center
the Microsoft 365 admin center
the Security & Compliance admin center

Role to assign to User3:

Cloud application administrator
Global administrator
Organization Management
Security Administrator

- ✍* User3 must be able to manage Office 365 connectors.
- ✍* The principle of least privilege must be used whenever possible.

Office 365 connectors are configured in the Exchange Admin Center.

You need to assign User3 the Organization Management role to enable User3 to manage Office 365 connectors.

A Global Admin could manage Office 365 connectors but the Organization Management role has less privilege.

Question No : 2 - (Topic 1)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You need to assign User2 the required roles to meet the security requirements.

Solution: From the Office 365 admin center, you assign User2 the Security Reader role. From the Exchange admin center, you assign User2 the Compliance Management role.

Does this meet the goal?

A. Yes

B. NO

Answer: A

Explanation:

✍ User2 must be able to view reports and schedule the email delivery of security and compliance reports.

The Security Reader role can view reports.

The Compliance Management role can schedule the email delivery of security and compliance reports.

Reference:

<https://docs.microsoft.com/en-us/exchange/permissions-exo/permissions-exo>

Question No : 3 - (Topic 1)

You need to meet the security requirement for Group1.

What should you do?

- A. Configure all users to sign in by using multi-factor authentication.
- B. Modify the properties of Group1.
- C. Assign Group1 a management role.
- D. Modify the Password reset properties of the Azure AD tenant.

Answer: D

Explanation: References:

✍ The members of Group1 must be required to answer a security question before changing their password.

If SSPR (Self Service Password Reset) is enabled, you must select at least one of the following options for the authentication methods. Sometimes you hear these options referred to as "gates."

- Mobile app notification
- Mobile app code
- Email
- Mobile phone
- Office phone
- Security questions

You can specify the required authentication methods in the Password reset properties of the Azure AD tenant. In this case, you should set the required authentication method to be 'Security questions'.

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/authentication/concept-sspr-howitworks>

Question No : 4 - (Topic 1)

You need to Add the custom domain name* to Office 365 K> support the planned changes as quickly as possible.

What should you create to verify the domain names successfully?

- A. three alias (CNAME) record
- B. one text (TXT) record
- C. one alias (CNAME) record
- D. three text (TXT) record

Answer: D

Explanation:

Contoso plans to provide email addresses for all the users in the following domains:

-  East.adatum.com
-  Contoso.adatum.com
-  Humongousinsurance.com

To verify three domain names, you need to add three TXT records.

Reference:

<https://docs.microsoft.com/en-us/office365/admin/setup/add-domain?view=o365-worldwide>

Question No : 5 - (Topic 1)

You need to assign User2 the required roles to meet the security requirements and the technical requirements.

To which two roles should you assign User2? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. the Exchange View-only Organization Management role
- B. the Microsoft 365 Records Management role
- C. the Exchange Online Help Desk role
- D. the Microsoft 365 Security Reader role
- E. the Exchange Online Compliance Management role

Answer: D,E

Explanation:

 User2 must be able to view reports and schedule the email delivery of security and compliance reports.

The Security Reader role can view reports but not schedule the email delivery of security and compliance reports.

The Exchange Online Compliance Management role can schedule the email delivery of security and compliance reports.

Reference:

<https://docs.microsoft.com/en-us/exchange/permissions-exo/permissions-exo>

Question No : 6 - (Topic 1)

Note This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You need to assign User2 the required roles to meet the security requirements.

Solution: From the Office 365 admin center, you assign User2 the Security Administrator role. From the Exchange admin center, you add User2 to the View-Only Management role.

Does this meet the goal?

- A. Yes
- B. NO

Answer: B

Explanation:

 User2 must be able to view reports and schedule the email delivery of security and compliance reports.

The Security Administrator role can view reports but not schedule the email delivery of security and compliance reports.

The View-Only Organization Management role cannot schedule the email delivery of security and compliance reports.

Reference:

<https://docs.microsoft.com/en-us/exchange/permissions-exo/permissions-exo>

Question No : 7 - (Topic 1)

To which Azure AD role should you add User4 to meet the security requirement?

- A. Password administrator
- B. Global administrator
- C. Security administrator
- D. Privileged role administrator

Answer: B

Explanation:

 User4 must be able to reset User3 password.

User3 is assigned the Customer Lockbox Access Approver role. Only global admins can reset the passwords of people assigned to this role as it's considered a privileged role.

Reference:

<https://techcommunity.microsoft.com/t5/Security-Privacy-and-Compliance/Customer-Lockbox-Approver-Role-Now-Available/ba-p/223393>

Question No : 8 - (Topic 1)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals- Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You need to assign User2 the required roles to meet the security requirement.

Solution: From the Office 365 admin center, you assign User2 the Records Management role. From the Exchange admin center, you assign User2 the Help Desk role.

Does that meet the goal?

- A. Yes
- B. NO

Answer: B

Question No : 9 - (Topic 1)

You need to meet the security requirement for the vendors.

What should you do?

- A. From the Azure portal, add an identity provider.
- B. From Azure Cloud Shell, run the New-AzureADUser cmdlet and specify the –UserPrincipalName parameter.
- C. From the Azure portal, create guest accounts.
- D. From Azure Cloud Shell, run the New-AzureADUser cmdlet and specify the –UserType parameter.

Answer: C

Explanation:

 Vendors must be able to authenticate by using their Microsoft account when accessing Contoso resources.

You can invite guest users to the directory, to a group, or to an application. After you invite a user through any of these methods, the invited user's account is added to Azure Active Directory (Azure AD), with a user type of Guest. The guest user must then redeem their invitation to access resources. An invitation of a user does not expire.

The invitation will include a link to create a Microsoft account. The user can then authenticate using their Microsoft account. In this question, the vendors already have Microsoft accounts so they can authenticate using them.

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/b2b/add-users-administrator>

Question No : 10 - (Topic 1)

You need to meet the security requirement for the vendors.

What should you do?

- A. From the Azure portal, modify the authentication methods.
- B. From Azure Cloud Shell, run the New-AzureADMSInvitation and specify the –InvitedUserEmailAddress cmdlet.
- C. From Azure Cloud Shell, run the Set-MsolUserPrincipalName and specify the –tenantID parameter.
- D. From the Azure portal, add an identity provider.

Answer: B

Explanation:

 Vendors must be able to authenticate by using their Microsoft account when accessing Contoso resources.

You can invite guest users to the directory, to a group, or to an application. After you invite a user through any of these methods, the invited user's account is added to Azure Active Directory (Azure AD), with a user type of Guest. The guest user must then redeem their invitation to access resources. An invitation of a user does not expire.

The invitation will include a link to create a Microsoft account. The user can then authenticate using their Microsoft account. In this question, the vendors already have Microsoft accounts so they can authenticate using them.

In this solution, we are creating guest account invitations by using the New-AzureADMSInvitation cmdlet and specifying the –InvitedUserEmailAddress parameter.

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/b2b/add-users-administrator>

<https://docs.microsoft.com/en-us/powershell/module/azuread/new->

azureadmsinvitation?view=azureadps-2.0

Question No : 11 - (Topic 1)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You need to assign User2 the required roles to meet the security requirements.

Solution: From the Office 365 admin center, you assign User2 the Security Reader role.

From the Exchange admin center, you assign User2 the Help Desk role.

Does this meet the goal?

- A. Yes
- B. NO

Answer: B

Explanation:

 User2 must be able to view reports and schedule the email delivery of security and compliance reports.

The Security Reader role can view reports but not schedule the email delivery of security and compliance reports.

The Help Desk role cannot schedule the email delivery of security and compliance reports.

Reference:

<https://docs.microsoft.com/en-us/exchange/permissions-exo/permissions-exo>

Question No : 12 HOTSPOT - (Topic 1)

You need to meet the technical requirements for the user licenses.

Which two properties should you configure for each user? To answer, select the appropriate properties in the answer area.

NOTE: Each correct selection is worth one point.

Identity

Name <input type="text" value="User1"/>	First Name <input type="text"/>	Last Name <input type="text"/>
User name <input type="text" value="User1@Contoso1410.onmicrosoft.com"/>	User type Member

All new users must be assigned Office 365 licenses automatically.

To enable Microsoft 365 license assignment, the users must have a username. This is also the UPN. The users must also have a Usage Location.

Topic 2, Fabrikam, Inc

This is a case study. **Case studies are not timed separately. You can use as much exam time as you would like to complete each case.** However, there may be additional case studies and sections on this exam. You must manage your time to ensure that you are able to complete all questions included on this exam in the time provided.

To answer the questions included in a case study, you will need to reference information that is provided in the case study. Case studies might contain exhibits and other resources that provide more information about the scenario that is described in the case study. Each question is independent of the other questions in this case study.

At the end of this case study, a review screen will appear. This screen allows you to review your answer and to make changes before you move to the next section of the exam. After you begin a new section, you cannot return to this section.

To start the case study

To display the first question in this case study, click the **Next** button. Use the buttons in the

left pane to explore the content of the case study before you answer the questions. Clicking these buttons displays information such as business requirements, existing environment, and problem statements. When you are ready to answer a question, click the **Question** button to return to the question.

Overview

Fabrikam, Inc. is an electronics company that produces consumer products. Fabrikam has 10,000 employees worldwide.

Fabrikam has a main office in London and branch offices in major cities in Europe, Asia, and the United States.

Existing Environment

Active Directory Environment

The network contains an Active Directory forest named `fabrikam.com`. The forest contains all the identities used for user and computer authentication.

Each department is represented by a top-level organizational unit (OU) that contains several child OUs for user accounts and computer accounts.

All users authenticate to on-premises applications by signing in to their device by using a UPN format of `username@fabrikam.com`.

Fabrikam does **NOT** plan to implement identity federation.

Network Infrastructure

Each office has a high-speed connection to the Internet.

Each office contains two domain controllers. All domain controllers are configured as a DNS server.

The public zone for `fabrikam.com` is managed by an external DNS server.

All users connect to an on-premises Microsoft Exchange Server 2016 organization. The users access their email by using Outlook Anywhere, Outlook on the web, or the Microsoft Outlook app for iOS. All the Exchange servers have the latest cumulative updates installed.

All shared company documents are stored on a Microsoft SharePoint Server farm.

Requirements

Planned Changes

Fabrikam plans to implement a Microsoft 365 Enterprise subscription and move all email

and shared documents to the subscription.

Fabrikam plans to implement two pilot projects:

- ✍ Project1: During Project1, the mailboxes of 100 users in the sales department will be moved to Microsoft 365.
- ✍ Project2: After the successful completion of Project1, Microsoft Teams & Skype for Business will be enabled in Microsoft 365 for the sales department users.

Fabrikam plans to create a group named UserLicenses that will manage the allocation of all Microsoft 365 bulk licenses.

Technical Requirements

Fabrikam identifies the following technical requirements:

- ✍ All users must be able to exchange email messages successfully during Project1 by using their current email address.
- ✍ Users must be able to authenticate to cloud services if Active Directory becomes unavailable.
- ✍ A user named User1 must be able to view all DLP reports from the Microsoft 365 admin center.
- ✍ Microsoft Office 365 ProPlus applications must be installed from a network share only.
- ✍ Disruptions to email address must be minimized.

Application Requirements

Fabrikam identifies the following application requirements:

- ✍ An on-premises web application named App1 must allow users to complete their expense reports online.
- ✍ The installation of feature updates for Office 365 ProPlus must be minimized.

Security Requirements

Fabrikam identifies the following security requirements:

- ✍ After the planned migration to Microsoft 365, all users must continue to authenticate to their mailbox and to SharePoint sites by using their UPN.
- ✍ The memberships of UserLicenses must be validated monthly. Unused user accounts must be removed from the group automatically.
- ✍ After the planned migration to Microsoft 365, all users must be signed in to on-premises and cloud-based applications automatically.
- ✍ The principle of least privilege must be used.

Question No : 13 - (Topic 2)

You need to meet the application requirement for App1.

Which three actions should you perform? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. From the Azure Active Directory admin center, configure the application URL settings.
- B. From the Azure Active Directory admin center, add an enterprise application.
- C. On an on-premises server, download and install the Microsoft AAD Application Proxy connector.
- D. On an on-premises server, install the Hybrid Configuration wizard.
- E. From the Microsoft 365 admin center, configure the Software download settings.

Answer: A,B,C

Explanation:

-  An on-premises web application named App1 must allow users to complete their expense reports online.

Application Proxy is a feature of Azure AD that enables users to access on-premises web applications from a remote client. Application Proxy includes both the Application Proxy service which runs in the cloud, and the Application Proxy connector which runs on an on-premises server. Azure AD, the Application Proxy service, and the Application Proxy connector work together to securely pass the user sign-on token from Azure AD to the web application.

In this question, we need to add an enterprise application in Azure and configure a Microsoft AAD Application Proxy connector to connect to the on-premises web application (App1).

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/manage-apps/application-proxy#how-application-proxy-works>

Question No : 14 - (Topic 2)

You need to recommend which DNS record must be created before adding a domain name for the project.

You need to recommend which DNS record must be created before you begin the project.

Which DNS record should you recommend?

- A. alias (CNAME)
- B. host information (HINFO)
- C. host (A)
- D. mail exchanger (MX)

Answer: C

Explanation:

When you add a custom domain to Office 365, you need to verify that you own the domain. You can do this by adding either an MX record or a TXT record to the DNS for that domain.

Reference:

<https://docs.microsoft.com/en-us/office365/admin/get-help-with-domains/create-dns-records-at-any-dns-hosting-provider?view=o365-worldwide>

Question No : 15 - (Topic 2)

Which role should you assign to User1?

- A. Security Administrator
- B. Records Management
- C. Security Reader
- D. Hygiene Management

Answer: C

Explanation:

 A user named User1 must be able to view all DLP reports from the Microsoft 365 admin center.

Users with the Security Reader role have global read-only access on security-related features, including all information in Microsoft 365 security center, Azure Active Directory, Identity Protection, Privileged Identity Management, as well as the ability to read Azure Active Directory sign-in reports and audit logs, and in Office 365 Security & Compliance Center.

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/users-groups-roles/directory->

assign-admin-roles

Question No : 16 - (Topic 2)

Which migration solution should you recommend for Project1?

- A. From the Microsoft 365 admin center, start a data migration and click **Exchange** as the data service.
- B. From the Exchange admin center, start a migration and select **Cutover migration**.
- C. From the Exchange admin center, start a migration and select **Staged migration**.
- D. From the Microsoft 365 admin center, start a data migration and click **Upload PST** as the data service.

Answer: A

Explanation:

Project1: During Project1, the mailboxes of 100 users in the sales department will be moved to Microsoft 365.

Fabrikam does NOT plan to implement identity federation.

All users must be able to exchange email messages successfully during Project1 by using their current email address.

During Project1, some users will have mailboxes in Microsoft 365 and some users will have mailboxes in Exchange on-premises. To enable users to be able to exchange email messages successfully during Project1 by using their current email address, we'll need to configure hybrid Exchange.

A new way to migrate mailboxes in a hybrid Exchange configuration is to use the Microsoft 365 data migration service. The data migration service can migrate Exchange, SharePoint and OneDrive. Therefore, we need to start a data migration and click **Exchange** as the service to be migrated.

Reference:

<https://docs.microsoft.com/en-us/fasttrack/O365-data-migration>

<https://docs.microsoft.com/en-us/exchange/hybrid-deployment/move-mailboxes>

Question No : 17 - (Topic 2)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your company has a Microsoft Office 365 tenant.

You suspect that several Office 365 features were recently updated.

You need to view a list of the features that were recently updated in the tenant.

Solution: You use Monitoring and reports from the Compliance admin center.

Does this meet the goal?

- A. Yes
- B. No

Answer: B

Explanation:

Depending on what your organization's Office 365 subscription includes, the **Dashboard** in Security & Compliance includes several widgets, such as Threat Management Summary, Threat Protection Status, Global Weekly Threat Detections, Malware, etc. The Compliance admin center in Microsoft 365 contains much of the same information but also includes additional entries focusing on alerts, data insights.

The **Monitoring and reports** section from the Compliance admin center does not display a list of the features that were recently updated in the tenant so this solution does not meet the goal.

To meet the goal, you need to use **Message center** in the Microsoft 365 admin center.

Reference:

<https://docs.microsoft.com/en-us/office365/admin/manage/message-center?view=o365-worldwide>

Question No : 18 - (Topic 2)

You need to ensure that all the sales department users can authenticate successfully during Project1 and Project2.

Which authentication strategy should you implement for the pilot projects?

- A. password hash synchronization and seamless SSO
- B. pass-through authentication
- C. password hash synchronization
- D. pass-through authentication and seamless SSO

Answer: A

Explanation:

- ✍ Project1: During Project1, the mailboxes of 100 users in the sales department will be moved to Microsoft 365.
- ✍ Project2: After the successful completion of Project1, Microsoft Teams & Skype for Business will be enabled in Microsoft 365 for the sales department users.
- ✍ After the planned migration to Microsoft 365, all users must be signed in to on-premises and cloud-based applications automatically.
- ✍ Fabrikam does NOT plan to implement identity federation.
- ✍ After the planned migration to Microsoft 365, all users must continue to authenticate to their mailbox and to SharePoint sites by using their UPN.

You need to enable password hash synchronization to enable the users to continue to authenticate to their mailbox and to SharePoint sites by using their UPN.

You need to enable SSO to enable all users to be signed in to on-premises and cloud-based applications automatically.

Reference:

<https://docs.microsoft.com/en-us/azure/security/azure-ad-choose-authn>

Question No : 19 - (Topic 2)

Which migration solution should you recommend for Project1?

- A. From Exchange Online PowerShell, run the New-MailboxImportRequest cmdlet.

- B. From Exchange Online PowerShell, run the New-MailboxExportRequest cmdlet.
- C. From the Microsoft 365 admin center, start a data migration and click Upload PSST as the data service.
- D. From the Exchange admin center, start a migration and select Remote move migration

Answer: D

Explanation: During Project1, some users will have mailboxes in Microsoft 365 and some users will have mailboxes in Exchange on-premises. To enable users be able to exchange email messages successfully during Project1 by using their current email address, we'll need to configure hybrid Exchange.

To migrate mailboxes in a hybrid Exchange configuration, you use Exchange admin center perform Remote move migrations.

Reference:

Question No : 20 HOTSPOT - (Topic 2)

You need to create the UserLicenses group. The solution must meet the security requirements.

Which group type and control method should you use? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

Group type:

	▼
Distribution list	
Office 365 group	
Security group	

Control method:

	▼
a conditional access policy	
a retention policy	
an access review	
an alert policy	

Answer:

Answer Area

Group type:

	▼
Distribution list	
Office 365 group	
Security group	

Control method:

	▼
a conditional access policy	
a retention policy	
an access review	
an alert policy	

Explanation:

Group type:

Distribution list
Office 365 group
Security group

Control method:

a conditional access policy
a retention policy
an access review
an alert policy

Fabrikam plans to create a group named UserLicenses that will manage the allocation of all Microsoft 365 bulk licenses.

The memberships of UserLicenses must be validated monthly. Unused user accounts must be removed from the group automatically.

The group needs to be a Security group.

Azure Active Directory (Azure AD) access reviews enable organizations to efficiently manage group memberships, access to enterprise applications, and role assignments.

User's access can be reviewed on a regular basis to make sure only the right people have continued access.

Question No : 21 HOTSPOT - (Topic 2)

You create the Microsoft 365 tenant.

You implement Azure AD Connect as shown in the following exhibit.

Azure Active Directory admin center

Home > Azure AD Connect

Azure AD Connect
Azure Active Directory

✕ Troubleshoot ↻ Refresh

SYNC STATUS

	Sync Status	Enabled
	Last Sync	Less than 1 hour ago
	Password Sync	Enabled

USER SIGN-IN

	Federation	Disabled	0 domains
	Seamless single sign-on	Disabled	0 domain
	Pass-through authentication	Disabled	0 agents

Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic.

NOTE: Each correct selection is worth one point.

Answer Area

Sales department users can access [answer choice] applications by using SSO.

▼
both on-premises and cloud-based
only cloud-based
only on-premises

If Active Directory becomes unavailable, users can access the resource [answer choice].

▼
both on-premises and in the cloud
in the cloud only
on-premises only

Answer:

Answer Area

Sales department users can access [answer choice] applications by using SSO.

▼
both on-premises and cloud-based
only cloud-based
only on-premises

If Active Directory becomes unavailable, users can access the resource [answer choice].

▼
both on-premises and in the cloud
in the cloud only
on-premises only

Answer Area

Sales department users can access [answer choice] applications by using SSO.

▼
both on-premises and cloud-based
only cloud-based
only on-premises

If Active Directory becomes unavailable, users can access the resource [answer choice].

▼
both on-premises and in the cloud
in the cloud only
on-premises only

Explanation:

In the exhibit, seamless single sign-on (SSO) is disabled. Therefore, as SSO is disabled in the cloud, the Sales department users can access only on-premises applications by using SSO.

In the exhibit, directory synchronization is enabled and active. This means that the on-premises Active Directory user accounts are synchronized to Azure Active Directory user accounts. If the on-premises Active Directory becomes unavailable, the users can access resources in the cloud by authenticating to Azure Active Directory. They will not be able to access resources on-premises if the on-premises Active Directory becomes unavailable as they will not be able to authenticate to the on-premises Active Directory.

Question No : 22 DRAG DROP - (Topic 2)

You need to prepare the environment for Project1.

You create the Microsoft 365 tenant.

Which three actions should you perform in sequence next? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions	Answer Area
Configure the required DNS records and verify fabrikam.com as a custom domain.	
Implement directory synchronization.	
Create a Microsoft Azure Active Directory (Azure AD) tenant.	
Modify the Exchange ActiveSync Access Settings.	
Run the Hybrid Configuration wizard.	

Answer:

Actions	Answer Area
Configure the required DNS records and verify fabrikam.com as a custom domain.	Create a Microsoft Azure Active Directory (Azure AD) tenant.
Implement directory synchronization.	Configure the required DNS records and verify fabrikam.com as a custom domain.
Create a Microsoft Azure Active Directory (Azure AD) tenant.	Implement directory synchronization.
Modify the Exchange ActiveSync Access Settings.	
Run the Hybrid Configuration wizard.	

Answer Area

Create a Microsoft Azure Active Directory (Azure AD) tenant.
Configure the required DNS records and verify fabrikam.com as a custom domain.
Implement directory synchronization.

Explanation:

Fabrikam plans to implement a Microsoft 365 Enterprise subscription and move all email and shared documents to the subscription. All users must be able to exchange email messages successfully during Project1 by using their current email address. After the planned migration to Microsoft 365, all users must continue to authenticate to their

mailbox and to SharePoint sites by using their UPN.

This configuration requires a hybrid Exchange configuration during the pilot phase. This means that you will have mailboxes hosted in Exchange Online and mailboxes hosted in Exchange on-premise.

The first steps to configure Exchange hybrid are to Create the Azure AD tenant, add the Fabrikam.com domain as a custom domain, then configure directory synchronization to replicate the on-prem Active Directory user accounts to Azure Active Directory.

Question No : 23 HOTSPOT - (Topic 2)

You need to meet the application requirements for the Office 365 ProPlus applications.

You create an XML files that contains the following settings.

```
<Add SourcePath="\\Server1\OfficeSoftware"
      OfficeClientEdition="32"
      Channel="Targeted"
      AllowCdnFallback="True">
  <Product ID="O365ProPlusRetail">
    <Language ID="MatchOS" Fallback="en-us" />
  </Product>
</Add>
```

Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic.

NOTE: Each correct selection is worth one point.

Office 365 ProPlus feature updates will be installed [answer choice].

▼
automatically once a year
automatically twice a year
manually

To meet the technical requirement for Office 365 ProPlus, [answer choice].

▼
Change SourcePath to DownloadPath.
Set the value for AllowCdnFallback to False.
Add SCKCacheOverride=1 to the Product section.

Answer:
